

# PRED FEED

**WETTABLE POWDER**

## **IPM Food for Beneficial Insects**

**Guaranteed Analysis:**

|                      |                            |
|----------------------|----------------------------|
| <b>Crude Protein</b> | <b>Not less than 15.0%</b> |
| <b>Crude Fat</b>     | <b>Not less than 0.2%</b>  |
| <b>Crude Fiber</b>   | <b>Not less than 1.0%</b>  |
| <b>Crude Ash</b>     | <b>Not less than 10.0%</b> |

- ⇒ Provides complete nutritional diet for predatorial insects
- ⇒ Special formulation of dry ingredients to attract the number of predatorial insects within a targeted area.

**Pred Feed** is a food supplement for beneficial insects that can be applied to the crop.

Being a wettable powder means that **Pred Feed** can be applied by either ground or aerial application.

### **Integrated Pest Management (IPM)**

IPM is now fully entrenched as part of the viable approach to growing cotton. Traditional programs have resulted in resistance development, environmental problems and with costs increasing due to more frequent applications for the harsher chemicals, and unsustainable future.

The establishment of not only **Pred Feed**, but also the acceptability of a programmed approach to IPM. The ability to produce acceptable, economic yields using a softer more sustainable approach is now a reality.

## **DIRECTIONS FOR USE – COTTON**

**Pred Feed IPM** should be used at the rate of 2.5kg per sprayed hectare in clean conventional air or ground spray equipment.

Ground Rig: Apply in 50 – 100 litres of water per hectare.

Aerial Spray: Apply in minimum of 20 litres of water per hectare.

The application rate of 2.5kg per hectare may be achieved by spraying every alternative swath at the rate of 5kg per hectare. **Pred Feed** may be applied several times prior to the increase of pests.
